

We know Nylon

and we'd be pleased to introduce you.

ENSINGER/PennFibre is the nation's leading producer of thin section nylon products in sheet, roll, strip, and punched products. We offer more grades and formulations of engineering grade nylons than any extruder in the industry.

If you have a demand for thin section specialty nylons nobody else can meet your requirements like *ENSINGER/PennFibre*. We've got High Temperature Nylons (HTN), MDS nylons, ESD formulations, super tough, weather resistant, glass reinforced, and impact modified grades.

As a pioneer in thermoformable nylons, *ENSINGER/PennFibre* has not only taken the lead in commercial production, we also offer a broader selection of formable nylons than any other extruder in the world. Our formable nylons include neat, glass filled, and FR formulations to meet the most demanding thermoforming applications.
